Subject: Motivation Letter for Scholarship – PhD Program in Animal Nutrition

Dear Members of the Scholarship Committee,

I am writing to express my strong interest in pursuing a PhD in Animal Nutrition at the University of Göttingen with the support of the DAAD Scholarship. My primary motivation is to develop sustainable and research-based livestock feeding strategies that address the critical challenges of food security and rural economic development in Bangladesh.

Introduction

My academic journey at Bangladesh Agricultural University (BAU) has provided me with a strong foundation in animal nutrition, particularly in ruminant nutrition and feed formulation. During my Master's research, I conducted studies on the proximate evaluation and nutrient digestibility of locally available feed resources. This research enabled me to develop strong laboratory skills, including dry matter analysis, crude protein determination, and in vitro digestibility techniques. Working directly with non-conventional feed resources in resource-limited farming systems has given me valuable insights into the challenges faced by smallholder farmers. I observed how improving nutrient utilization and feed efficiency can significantly enhance livestock productivity and farmers' livelihoods. These experiences have motivated me to pursue advanced research in nutritional biochemistry and sustainable livestock production systems.

Academic foundation and research experience

The University of Göttingen is internationally recognized for its excellence in agricultural and animal science research. I am particularly attracted to its strong research infrastructure, state-of-the-art laboratory facilities, and interdisciplinary approach to livestock science. The opportunity to work in a collaborative research environment with distinguished faculty members and international scholars would significantly strengthen my scientific skills and research perspective. Germany is also one of the global leaders in agricultural innovation and sustainable farming technologies. Studying in Germany will allow me to gain exposure to advanced research methodologies, analytical tools, and modern laboratory techniques that are currently limited in my home country. Moreover, the university's commitment to global agricultural development aligns closely with my professional aspirations.

Why the University of Göttingen and Germany

My long-term goal is to become a leading researcher and academic in the field of animal nutrition in Bangladesh. After completing my PhD, I plan to return to Bangladesh Agricultural University to contribute to research and teaching. I aim to develop practical feeding strategies that reduce feed costs, improve nutrient efficiency, and enhance livestock productivity for smallholder farmers. By integrating advanced nutritional science with practical field applications, I hope to contribute to national livestock development and support the Sustainable Development Goals, particularly those related to zero hunger, food security, and poverty reduction.

Long-term career goals and contribution to Bangladesh

I am confident that my academic background, research experience, and strong motivation for sustainable livestock development make me a suitable candidate for the DAAD Scholarship. I am fully prepared for the academic rigor of doctoral research and look forward to the opportunity to contribute to the academic and research community at the University of Göttingen.

Conclusion

Thank you very much for your time and consideration.

Sincerely,
Handwritten signature
